Group project

Instructions:

1. Groups of three (3) or four (4) members each should be formed, where each group must choose a topic to apply the concepts developed during the course. It can be any subject covered by the program of the discipline, and the level of difficulty should be appropriate for a group of three or four members.
2. The presentation of the work will be oral, where any member of the group should be able to explain each stage of the project.
3. In addition to the oral presentation, a brief report of the project should be provided, containing an abstract, figures (if necessary), the selected numerical method, the implemented code algorithm, a discussion of the results, conclusions, and bibliography. The report must be written following the format of a scientific paper (e.g., APA, ABNT). The report can be written in Spanish, Portuguese, or English.
4. Until the presentation, project revisions can be made with the course instructors.
5. The report must be submitted as a PDF file.
